

Spring Term 2 What Changes Can I See?

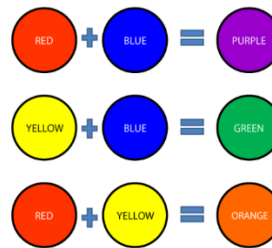

I need to know and remember that:

- I use my senses to explore. They are:

- Colours can change when you mix them.

- The weather can change.

- We change as we grow-up.

- Plants and flowers grow and change.

- There are seasons and they change.

To help my learning I need to know and understand these words:

change- different

weather- rain, snow, sunshine, wind, thunder/lightning

colours- red, yellow, blue, green, purple, orange

mix- put things together

size- whether something is big or small

shape- circle, square, rectangle, triangle

bud- the part of a plant that grows into a leaf or flower

blossom- a flower on a tree or bush

seed- a baby plant

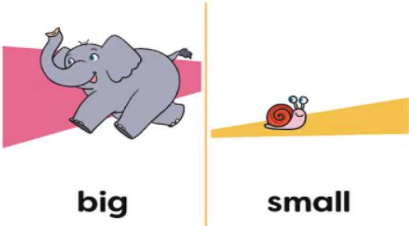

spring- when the blossoms come onto the trees

summer- when it's hot and sunny

autumn- when the leaves fall off the trees

winter- when it's cold and the trees are bare

And to use these comparisons to help me talk about the changes I can see:

 <p>big small</p> <p>big/small</p>	 <p>hot/cold</p>
 <p>dry/wet</p>	 <p>light/dark</p>

What changes can you see?

Talk about this with your grown-up!
