

Spring Term 1

Can a penguin live in a hot place?

I need to know and remember that:

- Explorers learn through their senses

- The Arctic is at the top of the world

- Antarctica is at the bottom of the world

- A savanna is an area of grassland

- Different animals live in different places

- The Arctic, Antarctica and the savannah are different to Carshalton and have a different way of life.

To help my learning I need to know and understand these words:

explorer- a person who finds out about places, animals and people

expedition- a trip to a new place to learn about it

senses- parts of our body that help us to learn about the world around us

freeze- to change water to ice

heat- to make something warm or hot

melt- when ice turns back to water

frost- water on the ground freezes and makes the place all white

icebergs- a big mountain of ice

watering holes- a place where animals can drink in the savanna

dry- not wet

wet- covered with water

temperature- a number that helps us to know how hot or cold it is

habitat- a place where someone or something lives

environment- the type of place or surroundings

The names of these animals:

 <p>caribou</p>	 <p>seal</p>	 <p>polar bear</p>	 <p>snowy owl</p>
 <p>leopard</p>	 <p>gazelle</p>	 <p>rhinoceros</p>	 <p>hippopotamus</p>

Can a penguin live in a hot place?

Talk about this with your grown up!
