

In this unit, the pupils plan an educational visit. They research their destination and explore different routes. They find photographs, audio and video and add this content to a digital map.

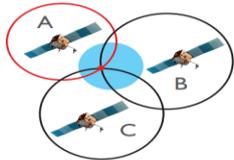

Information Technology

Prior Knowledge

Children will know how to capture images, video and audio and combine them in different formats such as in blogs and wiki pages.

How GPS works

Satellites know the exact time and their exact position. They transmit this information to any receiver that's listening. Receivers can work out their distance from any GPS satellite, because the signals travel at a known, exact speed. Using the distance from three or more satellites, the receiver then works out its position on the surface of the earth.

Computing Key Vocabulary	
Digital Portfolio	A computer-based collection of work gathered over time.
Geotagging	The process of tagging media, such as photographs, with geographical identification information (using latitude and longitude coordinates).
GPS	Global Position System (GPS): This system allows a user to determine their exact location using a network of military satellites.
GPS Tracker	A device or app which records, and sometimes transmits, latitude and longitude data from the GPS at regular intervals
Metadata	A set of data that describes and gives information about other data
Tracklog	An ordered of GPS coordinate measurements stored by a satellite navigation system.

E-safety:

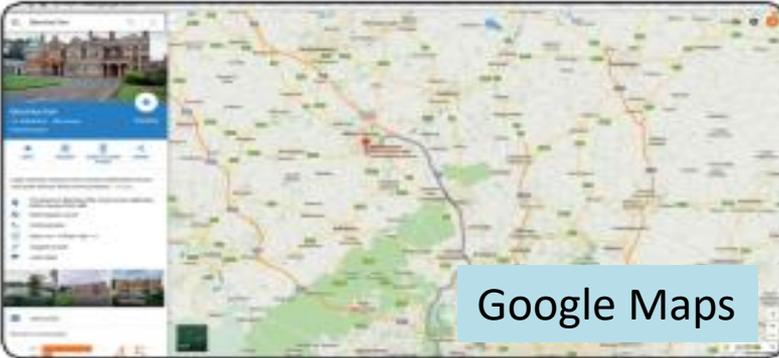

To understand the safe use of mobile technology, including GPS.

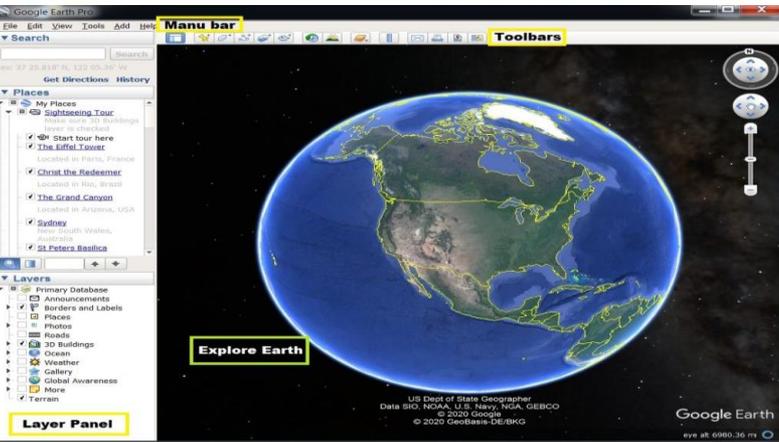

Year 6 – Summer 2
We Are Network Engineers
Computing

This half term we will be using...	
Hardware	Software/Apps
Winbooks/ Chromebooks iPods	PowerPoint Google Earth Google Maps

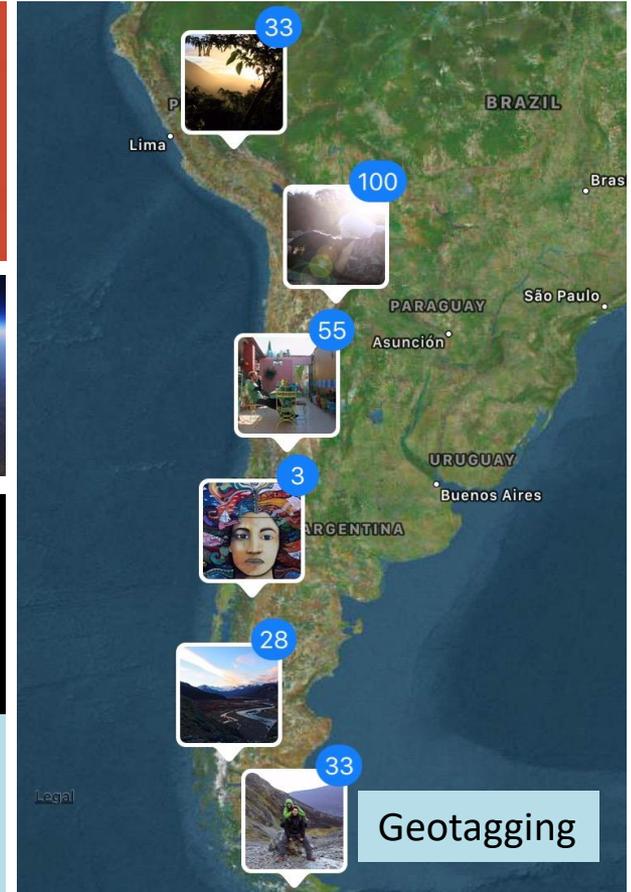

Google Maps

Explore Earth

You can use Google Earth to look at satellite images from different periods in time.

Geotagging

Planning a route in Google Maps.
